PROFESSIONAL SUMMARY:

Full stack developer experienced in building full-stack web applications and AI-driven systems. Skilled in React, Next.js, Node.js, and Python, with focused expertise in LangChain, LangGraph, n8n, and RAG-based automation. Proficient with AI coding tools including Claude, ChatGPT, and GitHub Copilot. Strong foundation in OOP, databases, and software engineering fundamentals with a commitment to clean, quality code.

TECHNICAL SKILLS:

- **Frontend** - JavaScript, TypeScript, React.js, Next.js, Redux, Zustand, Tailwind CSS, Framer Motion.
- **Backend** - Python, Node.js, Express.js, FastAPI.
- **AI & Automation** - LangChain, LangGraph, LangSmith, RAG, n8n, AI Workflows.
- **Database** - MongoDB, PostgreSQL, Qdrant, ChromaDB.
- **Tools & Version Control** - Git, Github, Postman, Visual Studio Code.

WORK EXPERIENCE:

Mozzine Technologies | Junior Frontend Developer (On-site)

Oct 2025 - July 2026

- Developed and delivered responsive, visually polished web interfaces for multiple projects, focusing on clean UI, smooth interactions, and cross-browser compatibility.
- Built reusable component libraries and interactive UI elements using modern frontend technologies, consistently translating design mockups into pixel-perfect, production-ready code.
- Collaborated closely with design and backend teams to integrate APIs and ensure seamless user experiences across desktop and mobile devices.

CodeExpert | Full Stack Intern (On-site)

June 2025 - Sept 2025

- Developing PindEats food delivery app using Next.js for frontend and Node.js/Express for backend, built Food, Gifts, and Properties pages along with User and Rider dashboards.
- Built a referral system that lets users share codes through WhatsApp and QR codes to earn free meals, handling both frontend interface and backend logic.
- Created API integrations between frontend and backend, and developed MongoDB schemas, routes, and controllers for Rider, Properties, and Gift modules.

PROJECTS:

Sarparast — AI-Powered PPSC & CSS Exam Preparation Platform

Full-Stack AI Engineering | Next.js, FastAPI, LangChain, LangGraph, Ollama, ChromaDB, Supabase, PostgreSQL, Docker, PostHog

[GitHub-Link](#)

1. Built and launched an AI SaaS product for test prep at production scale. Single FastAPI service exposing 8 backend modules (content, mock exams, essay grading, RAG mentor, billing, admin, analytics, community) with per-route Supabase JWT verification and strict server-side trust boundary for plan/role enforcement.
2. Implemented a retrieval-augmented mentor pipeline with chunked document intake and exam-type-filtered similarity search across ChromaDB and token-streamed chat answers; and a Pydantic-validated LangChain grading chain with auto-retry on invalid LLM output for essay assessment.
3. Fully local LLM inference with Ollama (gemma3:4b, nomic-embed-text) with zero third-party AI API dependency, backed by a request-limiter that queues AI calls instead of overloading the server, and a Postgres-backed per-plan quota system (usage_counters) to meter AI-costly operations, with structlog + PostHog for observability and a Next.js 16 / React 19 / Zustand frontend consuming the API through a single authenticated client.

EDUCATION:

Bachelor of Science in Computer Science

Nov 2021 - May 2025

University of Engineering and Technology (UET) | CGPA: 3.176

Intermediate (Pre-Engineering)

May 2019 - OCT 2021

Standard College of Science, Narowal | 93%
